

Benzinga

Fundamentals API v2

Abstract

A collection of equity fundamentals.

Connection

Connect using the following URL structure:

```
http://api.benzinga.com/api/v2/fundamentals/{endpoint}?{Parameters}
```

Authentication Parameters

```
token = <unique API token key> // unique api-key given to partner
```

Lookup Parameters

Only a single lookup parameter is allowed.

Max of 50 identifiers per lookups.

```
symbols = <SYMBOLS> // Comma separated list of equity symbols  
// Symbols are accepted with the format:  
// SYMBOL  
// EXCHANGE:SYMBOL  
// Symbols without an exchange will assume a US equity
```

```
isin = <ISIN> // Comma separated list of ISIN identifiers
```

```
cik = <CIK> // Comma separated list of CIK identifiers
```

Endpoint Parameter

An Endpoint is not required. By Omitting an endpoint, all available data will be returned. Endpoints are documented below.

The 'company' endpoint is returned with each lookup.

Data

Data will be provided in XML or JSON form. Upon success, it will return event data for specific calendars. XML or JSON may be selected by passing the proper header. XML is current default.

JSON Header:

Accept: application/json
